PROFILE SUMMARY

Backend-leaning software developer focused on building AI and retrieval systems, including RAG pipelines, hybrid search, LLM applications, speech-to-text workflows, and API-integrated agents. Comfortable owning projects end to end — from system design and implementation to deployment, debugging, and evaluation. Interested in building reliable AI systems involving semantic search, information retrieval, structured extraction, and production-oriented automation.

EXPERIENCE

Blockchain Intern — EcoServeDev

Jun 2024 – Jul 2024

Impact Tech Department

- Resolved 25+ bugs and stability issues across a Proof-of-Stake blockchain platform for carbon credit tracking and renewable-energy verification by debugging and refactoring frontend, backend, and database codebases during a one-month internship.
- Coordinated deployment of frontend, backend, and database components across 4+ independently hosted environments, gaining hands-on experience with real-world multi-service deployment workflows.

PROJECTS

RagBench — RAG Pipeline Evaluation & Optimization Platform

- Built a platform for evaluating and comparing Retrieval-Augmented Generation pipelines across document parsing, recursive chunking, embedding, retrieval, reranking, and LLM-based generation stages.
- Implemented hybrid retrieval combining dense vector search with BM25 sparse retrieval and Reciprocal Rank Fusion (RRF), using Qdrant for vector storage and BGE-small embeddings for semantic retrieval.
- Developed configurable experiments for chunk size, overlap, embedding models, retrieval strategies, reranking, and generation models to analyze performance trade-offs across RAG configurations.

Multi-Lingual Customer Support Call Auditor — AI Automation Platform

- Designed an event-driven pipeline to analyze customer support call recordings end to end, chaining multilingual speech-to-text (Whisper) with LLaMA 3-based sentiment analysis and issue classification.
- Built a real-time Streamlit dashboard on top of the pipeline and containerized the full setup with Docker for repeatable, environment-independent deployment.

Agri SMS AI Agent — Voice & SMS Automation for Farmers

- Built an AI assistant providing farmers access to information through SMS and voice by integrating n8n workflow orchestration, Twilio, and speech-to-text APIs, with a focus on low-connectivity environments.

Talent Bridge — BPUT Hackathon 2024 — Winner

- Built an AI-based student-job matching platform under hackathon time constraints, taking the system from concept to a working demonstration.

SKILLS

Programming: Python, JavaScript, Java, C, C++, SQL

Frameworks: FastAPI, Streamlit, React, Node.js, Express.js, Spring Boot

Databases: MongoDB, PostgreSQL, MySQL, SQLite, Qdrant

AI / LLMs / Agents: RAG, LLMs, Whisper, LLaMA 3 (Ollama), Hugging Face, OpenAI API, Agent Pipelines

Retrieval & Data: Embeddings, Dense Retrieval, BM25, Hybrid Search, RRF, Reranking, OCR, Web Scraping, API Integration

DevOps: Docker, Git, GitHub, Postman

Other: Blockchain / Distributed Ledgers

EDUCATION

B.Tech — Computer Science & Engineering — Trident Academy of Technology

2023 – Present

Bhubaneswar, India

CGPA: 8.3/ 10 (up to 7th Semester)

Senior Secondary (Class XII, ICSE Board) — ISPAT English Medium School, Rourkela

2021 – 2023

Percentage: 71%

Secondary (Class X, ICSE Board) — ISPAT English Medium School, Rourkela

2021

Percentage: 91%
